Moksh Barapatre

9049527009 | barapatremoksh1816@gmail.com | bymoksh.dev | www.linkedin.com/in/moksh-barapatre | github.com/Arsen1c-18

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, C
Frontend: React.js, Next.js, Tailwind CSS, Three.js
Backend: Node.js, NestJS, FastAPI, REST APIs, Prisma
Databases & Tools: PostgreSQL, MongoDB, Firebase Firestore, Supabase, Git, Linux, Docker, Vercel, Google Cloud Run
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Zocane Pvt. Ltd. Aug 2026 - Sep 2026

Frontend Developer Intern

- Led frontend delivery of a B2B gifting portal (Next.js 16, React 19, Turborepo): 8-step signup, CSV/XLSX import wizard, campaign builder, and billing console (70+ UI files).
- Modelled ˜67% fewer Firestore catalog reads per session via a cached, rate-limited server-side catalog API.
- Fixed 22 malformed cache-revalidation calls and SSR persistence of recently-viewed items with regression tests.

Shaibya Solutions May 2026 - Jul 2026

Software Development Intern

- Delivered two client sites end to end, owning scope and follow-ups directly with the client: Revolution Gym, a 3D landing experience (Next.js, Three.js), and Touchwood Furnitech, a catalog (Next.js, Tailwind CSS, Sanity CMS).
- Both sites scored 100 on Lighthouse Best Practices and SEO (desktop) with strong performance throughout.

www.revolutionfitnesss.in | www.touchwoodfurnitech.com

Google Developer Groups (GDG) Oct 2025 - Present

Design Team Lead

- Lead the design team's Figma work and coordinate with frontend contributors to keep production consistent with the design system.

Projects

SAMARTH - AI-Enabled Civic Grievance Platform Live | GitHub | Oct 2026

Next.js, TypeScript, FastAPI, MongoDB, Groq, Sarvam STT

- Designed and built end to end, from PRD and data modeling to a deployed product, with a human-in-the-loop core: AI recommends (classify, prioritize, flag) and human officials keep final authority.
- Hardened the lifecycle: 15-state state machine, role-gated transitions, atomic owner assignment, and server-enforced 5-role RBAC (JWT, Google OAuth), so client traffic can never mutate complaint state.
- Staged triage cascade: local TF-IDF + Logistic Regression first, a civic-scope gate, keyword fallback, and Groq only for residual uncertainty; classifier outputs stay staff-only and evaluation is disclosed as prototype-grade.
- Voice-first intake for low-literacy citizens (Sarvam STT; English, Hindi, Marathi) with bounded-timeout provider calls; deployed on Vercel + Render behind feature flags with a pytest suite.

Employee Transport Management System (ETMS) Jun 2026

Next.js, NestJS, PostgreSQL, Prisma, OSRM

- Primary author of a cab routing optimizer that cut pickup distance 39.6% (322.6 to 194.7 km) in under 8 ms on 32 real employee locations.
- Integrated the OSRM Table API (one batched matrix per solve) with in-memory and PostgreSQL caches and a haversine fallback.
- Designed a 34-model Prisma schema and 136 REST endpoints across scheduling, rosters, and project-based billing.

Education & Certifications

Ramdeobaba University Nagpur, India

B.Tech, Computer Science and Engineering (AI & Data Science) CGPA: 8.87; 3rd Year

Achievements

- Winner, Build With AI Hackathon 2026 Led RootsReimagined to build SafeDose, a pharma authentication platform (7-layer verification engine, Ed25519-signed QR codes).
- AWS Certified AI Practitioner
- Microsoft Certified: SQL AI Developer Associate
- Solved 200+ problems on LeetCode
