Moksh Barapatre

9049527009 | barapatremoksh1816@gmail.com | linkedin.com/in/moksh-barapatre | github.com/Arsen1c-18 | bymoksh.vercel.app

Technical Skills

Languages: JavaScript, TypeScript, C, C++, Python, SQL
Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3
Backend: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication
Databases: PostgreSQL, MongoDB, MySQL, Firebase Firestore, Supabase
Tools & Platforms: Git, GitHub, Linux, Docker, Vercel, Postman, Figma
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Shaibya Solutions May 2026 - August 2026
Software Development Intern

- Built and maintained full-stack web applications using Next.js, PostgreSQL, and Prisma, contributing to business workflow automation and internal management systems.
- Developed features for attendance tracking, route scheduling, manifest generation, and billing operations within an employee transport management platform.
- Designed responsive user interfaces and collaborated on API integration, database-driven workflows, and production feature delivery.

Upay NGO January 2026 - April 2026
Software Developer (Volunteer)

- Developed Petal, a menstrual health awareness platform focused on education, cycle tracking, and community support.
- Collaborated with NGO stakeholders to translate community requirements into practical digital solutions using React.js, FastAPI, and MongoDB.

Google Developer Groups (GDG) October 2025 - Present
Design Team Member

- Created UI designs and component layouts in Figma, emphasizing scalable design systems and responsive user experiences.
- Worked with frontend contributors to implement and refine website interfaces, ensuring consistency between design specifications and production-ready components.

Projects

Employee Transport Management System (ETMS) | *Next.js, PostgreSQL, Google Maps API, Prophet*

- Built a transport management platform supporting attendance tracking, route scheduling, manifest generation, billing operations, and transport administration workflows.
- Integrated OSRM and Google Maps API for route planning, distance calculations, and location-based transport management features.
- Developed demand forecasting modules using Prophet and designed PostgreSQL-based data models for operational reporting and planning.

SafeDose - Pharmaceutical Authentication Platform | *Next.js, Firebase, Gemini 2.0 Flash, Sarvam AI* | Link | GitHub

- Built a pharmaceutical authentication and supply chain platform for the Build With AI Hackathon 2026 to identify counterfeit and gray-market medicines.
- Architected a 7-layer verification engine generating a 0–100 Trust Score and integrated multilingual AI-powered verification using Gemini and Sarvam AI.

Petal - Menstrual Health Platform | *React.js, FastAPI, MongoDB* | Link | GitHub

- Built a menstrual health awareness platform featuring cycle tracking, educational resources, and community support modules.
- Developed AI-assisted health insights and personalized recommendation features to improve user engagement and accessibility.

Education

Ramdeobaba University Nagpur, India
B.Tech, Computer Science and Engineering (Artificial Intelligence & Data Science) - CGPA: 8.87 *3rd Year*

Achievements

Winner, Build With AI Hackathon 2026 - Led team RootsReimagined to build SafeDose, a pharmaceutical authentication platform, from concept through pitch deck and technical architecture.
Solved 200+ problems on LeetCode, covering data structures, algorithms, and problem-solving patterns.
